## DETAILED ACTION

### *Claim Rejections - 35 USC § 102*

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims, 1 and 4-9 are rejected under 35 U.S.C. 102 (e) as being anticipated by Chen et al. (USP. 6,744,296).

Regarding claim 1, figure 7 of Chen shows a device to control a sense amplifier comprising a resettable control circuit containing a first input (SET) connected to the ground, a second input (CLK) and a third input (CLR) receiving an output of the sense amplifier (190); a reset signal generator (R1, C3) having an input connected to output (Vo) of the sense amplifier; the other input is connected to ground or the second output of the sense amplifier. Note that an amplifier having a single output is equivalent to an amplifier having dual output wherein; one output is connected to the ground (see USP. 5,412,348). The reset signal generator (R1, C3) has an input coupled to the first output (V0) of amplifier (190). The other input, a terminal of capacitor (C3), is connected to ground i.e., a second output terminal of amplifier (190).

Regarding claims 4-7, the resettable control circuit is the D flip-flop (160).

Regarding claim 8, the input to the flip-flop can be any type of signal therefore, the recitation “pseudo word line signal is merely intended use thus, it do not further limit the limitations of the claims. It has been held that a recitation with respect to the manner in which a claimed apparatus is intended to be employed does not differentiate the claimed apparatus from a prior art apparatus satisfying the claimed structural limitations. Ex Parte Masham, 2 USPQ F.2d 1647 (1987). Therefore, these limitations have not been given patentable weight.

Art Unit: 2816

Regarding claim 9, the third input receives reset signal (CLR).

***Allowable Subject Matter***

Claims 11 and 12 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Claims 13-23 are allowed.

Claims 11 and 12 are objected to because the prior art of records (USP. 6,744,296) fails to teach or suggest a device for controlling a sense amplifier comprising a D flip-flop having a data input coupled to an output as called for in claim 11.

Claims 13-23 are allowed because the prior art of records fails to teach or suggest a device for controlling a sense amplifier comprising a D-flip-flop, first to fourth passgates, first to sixth inverters and a first NAND gate connected as recited in claims 23.
